Telephony
Integration**

Essential tools for
Building the **modern office**

NEC

Computer Telephony Integration (CTI)

**From
automating
the small
office . . .**

NEC's CTI puts even the smallest business on the leading edge of office productivity. Your NEC phone system, Personal Computer Interface (PCI) and TAPI software driver provide a powerful tool kit for building tomorrow's automated workplace. Add off-the-shelf TAPI compliant business software to your Windows® PC and you're ready to streamline a host of office tasks.

Use your Personal Information Manager (PIM) or Electronic Phonebook to look up important numbers and dial for you. If your NEC phone system has Caller ID capability, an Organizer or Contact Manager (such as Symantec's ACT!®) can automatically display the caller's name and account information before you even pick up the phone. And since NEC's TAPI driver supports TAPI Basic Services and many Supplemental Services, you may be able to develop additional advanced call processing functions.

**. . . to total
integrated
workplace
solutions.**

Add NEC's CTI to your enterprise communications system and the possibilities are virtually endless. Link your NEC phone system to your company's network for enterprise-wide Telemarketing Dial and Database Lookups. Develop custom software applications through the Open Application Interface (OAI) that are tailored to meet sophisticated site-specific demands.

NEC's CTI — Automated Solutions for the Modern Office

communications **without** compromise.
